1. Create Keyspace Employee - ('class': 'SimpleStrategy',
'replication-factor': 3);

Create Column Family employee-info (emp-id INT
PRIMARY KEY, emp-name VARCHAR, designation VARCHAR,
dept-name VARCHAR, dept-name VARCHAR, salary INT);

Begin BATCH

Insert INTO employee-info (emp-id, dept-name, designation,
dept, emp-name, salary) values (120, 'Design', 'Mad',
'10/11/15', 'Shubham', 150000);

Apply Batch;

select * from employee-info;

update employee-info SET emp-name = '~~Shubham~~ Sonali',
dept-name = 'IT' where emp-id = 121;
select * from employee-info;

Alter table employee-info Add project VARCHAR;

update employee SET project = 'Proj1' where emp-id = 120;
update employee-info SET project = 'Proj2' where
emp-id = 121;
update employee-info SET project = 'Proj3' where
emp-id = 123;

INSERT into employees-info (emp-id, dept-name, designation, doj, ~~dept~~ emp-name, project, salary) values (124, (PR), 'Senior Manager', '10/12/20', 'Aryan', 'Proj 4, 50000')

Select TTL (designation) from employees-info where ~~emp-id~~ emp-id = 124;
